| 45 | All Other Comments | Medical Group | Support with modifications | It would improve the understanding of measures for physicians and staff if the stewards could align such things as med lists when there is consistency amongst similar measures i.e. glimepiride/rosiglitazone not added to SPD measure's diabetes medications listing but in the PQA measures.   | Thank you for your comment. Your feedback has been noted and shared with the appropriate measure stewards.  |
| 46 | All Other Comments | Medical Group | Support with modifications | SPD measure - the optional exclusion should be required to be consistent with the other diabetes measures required exclusions.<br><br>"Members who do not have a diagnosis of diabetes (Diabetes Value Set) in any setting, during the measurement year or the year prior to the measurement year and who had a diagnosis of polycystic ovary syndrome (PCOS), gestational diabetes, or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year." | Thank you for your comment. It is an AMP program policy to align with measure steward's specifications whenever possible, to further enable alignment with regional and national performance measurement and benchmarking efforts. Your comments were reviewed by the measure steward (NCQA) who provided the following response: The optional exclusion for members who had a diagnosis of diabetes was moved to "Required Exclusions" as part of a phased cross-cutting change made across several HEDIS measures for MY 2022. The measure leads will continue assessing this change for other measures in a future MY. |
